## 1. Round 1

### 1.1 Reviewer 1

Date: 22 December 2023

I am pleased to recommend publishing this paper. Before publication, formal aspects need further refinement, namely:

Ensure that all literature items (including figures) have been cited; all references must be numbered consecutively (in the order of appearance in the body text), and citations in the text should be marked with numbers in square brackets.

Abbreviate the names of journals in the references section.

*1.2 Reviewer 2*

Date: 22 December 2023

The results section is not aligned with the objective of the study (at least the title). It seems more geared towards the reliability and validity of the instrument. I recommend that you focus on your objective. The results on reproducibility and validity could be used in a separate study. However, in this case, with 9 tables and 3 figures, your study objective would be eclipsed.

The other section of the manuscript is satisfactory except for the mentioned sections.
